WALKABLE OLEAN
A VISION FOR UNION STREET

Design Elements

The North Union Complete Street Transformation Project

Lighting

One lighting option being considered for the project is the “Canto G” by HESS. It offers overhead as well as pedestrian level lighting, creating an arch of light for the street. We’ve included a street view rendering below of what the “Canto G” light could look like along North Union Street.

Benches

One way to encourage more street activity is to provide comfortable benches at key locations on the street. Attractive benches are included in the North Union Street design, such as this one that is on display in City Hall.

Bike Racks

To encourage more cyclists to use North Union Street, attractive bicycle racks will be located along the street. We want to provide safe places for cyclists to leave their bikes, and visit the attractions on North Union Street. Below are a few of the options under consideration.

Tree Grates

Yes - we’re even looking at the tree grates and what fits best along the street. Here are some photos of samples under consideration - all of these options must be attractive while still being functional.
